

# wastewater studies

## Singapore phase 2 sewer rehabilitation contracts

### project summary

Greenspan conducted inflow and infiltration studies including salinity monitoring at in excess of 500 monitoring locations from 2003 to 2006. The projects including installation, maintenance, calibration of velocity and level instrumentation as well as dry and wet weather calibrations and reporting. Long term sites were also established with data uploaded directly to the web via GSM from within the manhole at 30 minute intervals.

Singapore

### project features

- Supply, installation and maintenance of sewer flow monitors (>500)
- Calibration of all instrumentation
- Rainfall monitoring
- Data editing and reporting
- Sewer overflow monitoring and alarming
- Web based data display and archiving
